<input type="checkbox"/>	Cardiology Clinical Notes NER Medical NLP NE Annotation Project	A specialized Medical NLP project for Named Entity Recognition (NER) on real-world cardiology clinical notes. This project focuses on extracting medical entities such as symptoms, diagnoses, investigations, medications, procedures, and treatment plans from patient admission-to-discharge narratives. Using 36 carefully curated labels, it supports structured medical data creation for AI and healthcare analytics pipelines. Ideal for training and validating medical NER models under the Cardiology domain using Doccano.	SequenceLabeling	2025/10/30 04:58	drpradeepai	
<input type="checkbox"/>	Medical NLP & Named Entity Recognition (NER) Annotation of 20 Respiratory Clinical Case Records	This project involves high-precision medical NLP and Named Entity Recognition (NER) annotation of 20 real-world respiratory clinical case records. Each case is structured and annotated using a 36-label schema designed for comprehensive clinical text understanding – covering entities such as symptoms, diagnoses, investigations, medications, procedures, devices, temporal expressions, risk factors, and outcomes. The annotation task is performed in Doccano (Sequence Labeling mode) using a standardized .csv dataset with one case per row. Each token or phrase is tagged with clinically validated entity labels aligned to modern NLP and NER best practices in healthcare. The resulting dataset provides a strong foundation for training and evaluating medical AI, clinical language models, and automated report generation systems in respiratory medicine. Key Highlights: • Domain: Respiratory Medicine (ICU / Pulmonary cases) • Annotation Platform: Doccano – Sequence Labeling • Labels: 36 high-yield medical NER categories • Output Format: JSONL / CSV – ready for model training • Applications: Clinical NLP, EMR automation, diagnosis extraction, decision support systems This project demonstrates advanced clinical text intelligence through accurate multi-entity annotation, bridging medical expertise and natural language processing.	SequenceLabeling	2025/10/11 05:24	drpradeepai	
<input type="checkbox"/>	Cardiology AI Review Annotated	This project focuses on reviewing and refining AI-generated annotations for 20 cardiology clinical case sheets. Entities follow a 26-label schema covering diagnoses, procedures, symptoms, medications, tests, and temporal expressions. Goal: create a clean, gold-standard cardiology NER dataset for medical AI model development and validation.	SequenceLabeling	2025/10/10 17:24	drpradeepai	
<input type="checkbox"/>	Cardiology Clinical Notes NER Medical NLP NE Annotation Project	A specialized Medical NLP project for Named Entity Recognition (NER) on real-world cardiology clinical notes.
